## Press Release

July 8, 2015

### **Major order for Bilfinger Mars Offshore in Poland: Production of 91 steel foundations for North Sea wind park**

Bilfinger Mars Offshore has won an order for the production of 91 steel foundations for the Race Bank North Sea wind park. Order volume is in the mid double-digit million Euro range. The wind park, located 28 kilometers from the United Kingdom's east coast, will have an output of about 580 MW and will provide 400,000 households with electricity. The client is Danish energy company Dong Energy A/S.

For Bilfinger Mars Offshore, the order is the starting signal for the production of offshore foundations at the new production site in the Polish city of Szczecin. "We will begin with the work as soon as the plant is officially opened in October 2015 and will complete production of the steel foundations by the end of the coming year", says the responsible Member of the Bilfinger Executive Board, Joachim Enenkel.

Bilfinger Mars Offshore is part of Offshore Systems which Bilfinger put up for sale at the beginning of 2015 in order to further focus the Group's activities on engineering and services. The unit has cutting-edge expertise in the design, manufacture and installation of offshore foundations in the North Sea and Baltic Sea. A total of more than 560 foundations for wind turbines, metering masts and substations have been built to date and a volume of more than €100 million is anticipated for 2015.
