**Lünendonk list 2017: Successful title defense  
Bilfinger once again leading industrial services provider in  
Germany**

When it comes to industrial services, Bilfinger is far and away the top choice for companies in Germany. For the ninth consecutive year, the company has taken first place in the industrial services sector according to the renowned Lünendonk List 2017, published annually by Lünendonk & Hossenfelder GmbH. With domestic sales of over €1 billion last year, the Group generated revenues of roughly a quarter more than the second placed company.

Tom Blades, Bilfinger CEO: “I am delighted that we have been at the top of the list for almost a decade. We enhance the efficiency of plants while reducing maintenance costs – something our customers appreciate. Especially in the field of digitalization, we apply predictive maintenance approaches that are setting standards in our industry.”

Advancing digitalization has provided a huge boost in the development of predictive maintenance. With a strict set of standards and best practices, Bilfinger’s Maintenance, Modifications & Operations (MMO) segment offers its customers the most modern maintenance available.

Bilfinger’s pilot project with Münzing Chemie is one example of how predictive maintenance works.

Bilfinger is a leading international industrial services provider. The Group enhances the efficiency of assets, ensures a high level of availability and reduces maintenance costs. The portfolio covers the entire value chain from consulting, engineering, manufacturing, construction, maintenance, plant expansion as well as turnarounds and also includes environmental technologies and digital applications.

The company delivers its services in two business segments: Engineering & Technologies and Maintenance, Modifications & Operations. Bilfinger is primarily active in the regions Continental Europe, Northwest Europe, North America and the Middle East. Process industry customers come from sectors that include chemicals & petrochem, energy & utilities, oil & gas, pharma & biopharma, metallurgy and cement. With its 37,000 employees, Bilfinger upholds the highest standards of safety and quality and generated an annual output volume of €4.2 billion in financial year 2016.

Bilfinger digitally records the technical information on an existing power plant and for two chemical reactors. Bilfinger's new digital MMO platform will also collate and comprehensively assess maintenance and production data.

Information about the plant can be accessed with just a few clicks on the integrated Bilfinger MMO platform. All engineering, maintenance, production, environmental and energy data recorded during the lifecycle of the plant is also systematically collated and analyzed. The aim is to use the existing data portfolio to tap new potential for the enhancement of plant efficiency and availability.
