

DOSING AND MIXING TECHNOLOGIES

ODORIZING UNITS

FOR PUBLIC GAS SUPPLY

Bilfinger Engineering & Maintenance GmbH offers complete solutions for odorizing units that meet the highest requirements of our clients. We are one of the leading suppliers of natural gas odorization units in Germany and Europe.

With your decision to install a Bilfinger Engineering & Maintenance odorizing unit you want to ensure a specific amount of odorant is continuously and reliable added to the gas flowing dependent on its actual flow rate.

Based on our development activities and experience, collected over several decades, we can offer a wide range of odorizing units perfectly designed to fulfill any of the individual requirements our clients might have with respect to size, model and technology applied.

Concerning the aspects of safety, accuracy and reliability, our odorizing units assume an essential role in your installation as a whole. All Bilfinger Engineering & Maintenance odorizing units are designed and manufactured state-of-the-art. The high quality standards applied throughout all our manufacturing processes as well as our reliable and short delivery times are only some examples of our strengths you can benefit from.

Furthermore Bilfinger Engineering & Maintenance is your competent partner when it comes to retrofitting and modernizing already existing units or when your target is to find and develop customized solutions for all components.

Benefit from the high degree of flexibility. Bilfinger Engineering & Maintenance is able to provide individually engineered solutions on the basis of modular design. All tank sizes, spillage trays and metering pumps are compatible with one another to allow utmost flexibility. Hence, the whole system may be ideally adapted to suit any spatial requirements you might have.

OUR COMPETENCE - YOUR ADVANTAGE

- Compact construction
- Customized design
- Lower maintenance requirements
