

# GLYCOL DOSING UNITS FOR GAS STORAGE

ENGINEERED PRODUCTS

**Bilfinger Engineering & Maintenance GmbH supplies complete glycol injection package solutions for underground gas storage.**

In recent years, Bilfinger Engineering & Maintenance GmbH has supplied many glycol injection packages for underground gas storage to a number of clients in Germany.

These units are used to add agent into the gas stream to avoid the formation of gas hydrate when removing gas from a cavern.

All glycol injection packages have been delivered according to special requirements and the individual wishes of each client.

As a result of our experience in the field of dosing and injection units, our designs are developed to ensure minimal operating costs.

Prompt and flexible after-sales service from our maintenance team is also available.

### OUR COMPETENCE - YOUR ADVANTAGE

- Compact construction
- Customized design
- Lower maintenance requirements
