

BILFINGER

WE MAKE ROTATING EQUIPMENT WORK

**BILFINGER: LEADING SERVICE PROVIDER FOR
ROTATING EQUIPMENT**

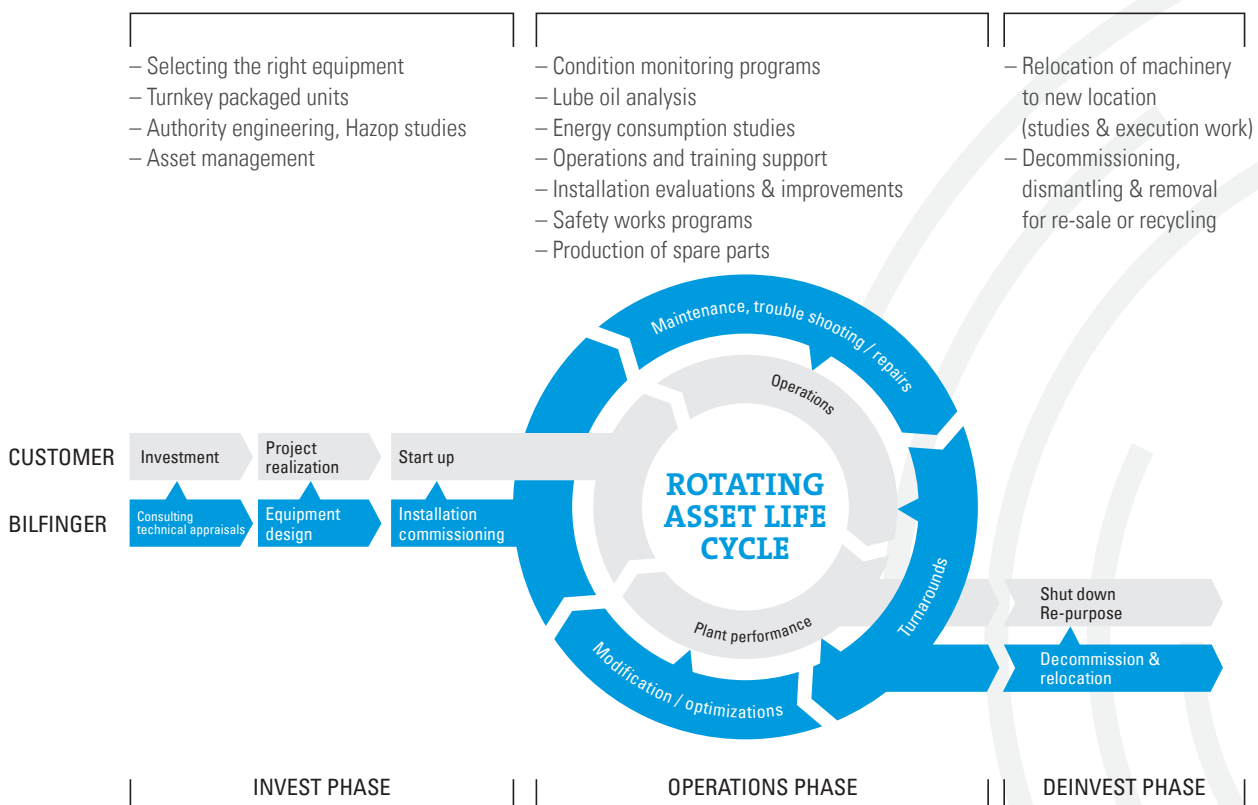

WE KEEP YOUR ASSETS ROTATING

Pumps, piston compressors and turbo machines are at the very core of many process technology production plants. They convey liquid or gaseous raw materials as well as end products in the process industry and keep them in motion. Because they generally operate around the clock, they have a major impact on the usability and economic efficiency of plants in the process industry.

As a full-service provider of rotating equipment, we accompany you from the initial concept phases of the production plant through to the ongoing optimization of your production processes. Whether inspections, repairs, efficient maintenance or engineering – we look after ongoing operations and guarantee process security and the highest level of availability.

Concentrate on your core competences and rely on cost efficient services and technical expertise from Bilfinger!

BILFINGER ROTATING EQUIPMENT SERVICES & SOLUTIONS

WE TAKE CARE OF ALL ROTATING EQUIPMENT AND ACCESSORIES:

- Gas / steam-turbines
- Piston, screw & turbo compressors
- Electric motors and generators
- Centrifugal pumps
- Canned motor pumps
- Metering pumps
- Diaphragm pumps
- Side channel pumps
- Liquid ring vacuum pumps
- Blowers
- Gears for agitators extruders and blenders
- Relief valves
- Actuated valves
- Mechanical seals

WE DELIVER A FULL RANGE OF COMPETENCES

WORKSHOP SERVICES

OEM independent full service including detailed damage report and solution oriented overhaul, mechanical grinding work, painting, balancing, shaft alignment, static pressure and performance testing. Certified workshop for ex-proof motors.

MAINTENANCE

Our competent technicians support you with all necessary maintenance works including vibration analysis (offline and online with our own sensor VibraCheck) and lube oil analysis including protocol. We can establish maintenance programs to increase asset availability and service life of any kind of equipment.

PREPARATION, PLANNING & SCHEDULING

For turbomachinery overhauls, we guarantee the efficient planning and scheduling of necessary work from experienced planners and supervisors to skilled technicians depending on your needs.

ONSITE OVERHAULS

Through our global resources network, we have access to a competent service workforce and special tools to provide the best service to our customers.

CONSULTING

As complete solution provider we follow and support our customers from the first production concept through to continuous improvement including energy utilisation and process performance during plant operation.

EQUIPMENT RENTAL POOL

With our equipment pool consisting of pumps, electric motors, frequency inverters and accessories, our customers have access to high quality equipment to be installed in the process plant or only as reserve on a monthly rental base including engineering and maintenance services.

PACKAGED UNITS

We provide turnkey rotating equipment packaged units: engineering, supply chain, mechanical and electrical assembly, automation and controls from one source.
