Industry ranking for facility services: Bilfinger maintains its leading position in Germany

In 2015, Bilfinger was once again the largest provider of facility services in Germany. In the recently published industry rankings from consulting firm Lünendonk, the company was ranked first, as in the years before.

The output volume generated by facility and real-estate services in Germany in 2015 amounted to around €1.3 billion. Including international activities, the Group's output volume in this business was around €2.3 billion. Bilfinger has recently achieved significant growth in its international markets. The British market in particular has increased substantially.

At the beginning of June 2016, the contracts were signed for the sale of the Building and Facility business to Swedish private equity company EQT. The transaction remains subject to approval from the responsible authorities.
